180 N. LaSalle Street
Chicago, Illinois 60601

Dear Mr. Rein:

I have reviewed the plans for the clean-up of 1855 Greenleaf Avenue, Elk Grove Village, submitted to us by your office. It appears that your plan does not specify the final disposal or treatment facilities to which solid and liquid waste will be taken. Please be advised that the facilities must be properly permitted and all waste shipments be accompanied by a manifest.

We are requesting from you the name and address of the disposal or treatment facilities which will receive waste from the clean-up. In addition we are requesting that a representative split sample be taken of each load and analyzed for total cyanide, free cyanide, and silver prior to transportation. The samples are to be split with a representative of this office. All laboratory analyses are to be completed before any material is removed from the site. Please contact me or Mary Schroeder at the above number to make arrangements for sampling.

Prior to discharging any waters to the MSD we would like an analysis of the waste water and written authorization from MSD allowing the discharge. We are also requesting that all floor drains be decontaminated if necessary.

Sincerely,

Kenneth P. Bechely, Northern Region Manager
